

HASSELBLAD HVM waist level viewfinder

A new waist level viewfinder for the H system cameras, providing the same convenient viewing angle that has been available for the V system. The bright and large viewfinder image is ideal for creative composing. The photographer can maintain eye contact with the model and full impact from shooting at a lower point than eye-level can be creatively used.

The HVM viewfinder is optimized for horizontal format shooting and is not suitable for vertical format use.
